JEMCO Complaint & NCR Management — Requirements

Oct 10, 2026 · @Adpedia

Purpose and scope

This document specifies the complaint and NCR management tool JEMCO needs, so the company can choose between building and buying with a shared definition of "done". It replaces the sketch in *JEMCO – Complaint Dashboard Proposal.xlsx* (last modified 16 Dec 2024) and restores everything that sketch dropped from the live form.

In scope: intake, triage, assignment, root cause and corrective action, verification, closure, SLA tracking, reporting, and the ISO 9001 record obligations the tool inherits from form F/QP/004-01 (V4).

Out of scope: vendor selection, technical architecture, UI design, and migration of historical paper NCRs. Those follow once the open decisions in the last section are made.

Every requirement is tagged **Must** (the tool fails its purpose without it) or **Should** (strongly recommended, can follow in a second release). Items marked **Decide** need an answer from JEMCO before they can be specified.

Current state

Today every non-conformance is a printed, hand-signed copy of form **F/QP/004-01 (V4)**, circulated by hand or email, with the NCR number allocated manually by QA. The form was created in 2001 and is at its fourth revision; nothing in it is searchable or countable without handling paper.

The form captures the following. All of it must survive into the new tool.

Section	Fields on the form	Owner
Header	NCR No. (given by QA), Date, Type (Corrective / Preventive / Opportunity for Improvement), Source (7 options), Process (9 options), Priority (Low / Medium / High / Urgent-Critical)	Issuer
Subject	Supplier Name, Customer Name, PO/DO Number, Date of delivery, CEF Number, Quantity, Issue description with attachments	Issuer

Section	Fields on the form	Owner
Assignment	Issued by (name and signature), Date Assigned, Respond by (Due Date), note "to be replied within 5 working days"	Issuer / QA
Response	Root Cause Analysis (Five-Why guidance; mandatory for corrective and preventive, optional for OFI), Correction and Corrective Action Plan, Date Action Completed, Name	Assignee
Verification	Lot Disposition Status (7 options), Result (Satisfactory: Closed / Non-Satisfactory: Returned for Further Processing), Verified by, Date	QA
Remarks	Notes and justification / QA Dept remarks	QA

The form already defines a response policy per priority: Low responds as availability allows and may extend the deadline with CAR Administrator permission; Medium responds as soon as feasible against a set deadline; High responds by the deadline and may interrupt lower-priority work; Urgent/Critical responds immediately with all available resources because the company is at legal or compliance risk. The new tool enforces this policy instead of printing it in a margin.

Gaps this specification closes

The proposal specified the intake page and nothing else; the twenty-two gaps below are the difference between that sketch and a working tool. Each is closed by a named section of this document.

#	Severity	Gap in the proposal	Closed in
1	Critical	No dashboard or report defined despite the title	Dashboard and reporting
2	Critical	Priority field dropped (form has 4 levels with response rules)	Priority and SLA rules
3	Critical	No due date or SLA clock (form has "Respond by" and a 5-working-day rule)	Priority and SLA rules
4	Critical	Parts 2 and 3 contain no fields, only a drawing	Field spec Parts 2 and 3

#	Severity	Gap in the proposal	Closed in
5	Critical	Routing depends on one named person ("Aishah will transfer")	Routing and escalation
6	High	Lot Disposition dropped (where cost is recorded)	Field spec Part 3
7	High	No return path after Non-Satisfactory verification	Workflow and lifecycle
8	High	No notifications to PIC or QA	Routing and notifications
9	High	Supplier Name dropped though Source includes Supplier/Subcontractor	Field spec Part 1
10	High	Preventive Action type dropped (2 of 3 kept)	Field spec Part 1
11	High	No audit trail, retention, e-signature or effectiveness review	Compliance and record control
12	High	Completion and verification dates dropped, so cycle time cannot be measured	Field spec Parts 2 and 3
13	Medium	NCR, complaint and ticket treated as one record	Data model
14	Medium	Permissions limited to "Part 3 visible to QA only"	Roles and permissions
15	Medium	No customer acknowledgement or response commitment	Workflow; Routing and notifications
16	Medium	Date of delivery and CEF Number dropped	Field spec Part 1
17	Medium	Source list lost its "Other" option	Field spec Part 1
18	Medium	Attachments only on intake, not on actions or closure evidence	Field spec Parts 2 and 3
19	Medium	No search, history or linking of related records	Data model; Dashboard and reporting
20	Low	Part 1 and Part 2 both labelled "Issuer parts"	Field spec Part 2
21	Low	Part 2 mixes QA triage and PIC action under one owner	Field spec Part 2; Workflow

#	Severity	Gap in the proposal	Closed in
22	Low	Typo "SUBCONTRACTOT" would propagate into dropdowns and reports	Field spec Part 1

Data model

The tool holds three linked record types, not one, because a customer complaint, a quality non-conformance and a piece of assigned work have different owners, clocks and audiences. The proposal's single form is why Priority, Disposition and Supplier fell out: they belong to different records.

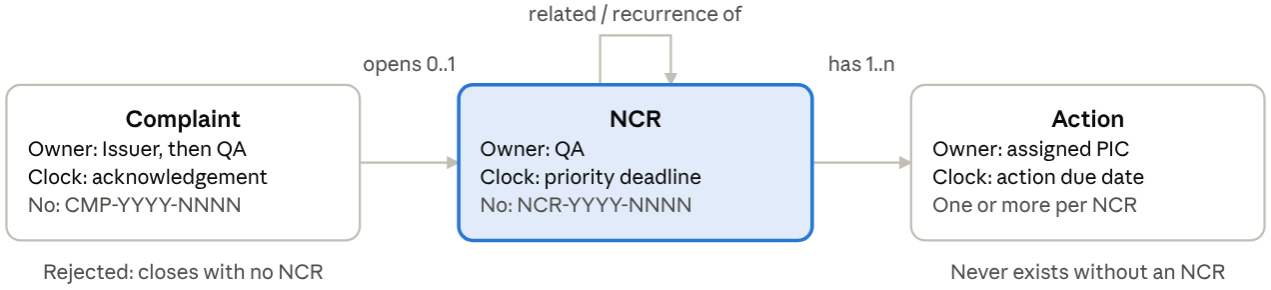

Record	What it is	Owned by	Clock	Can exist alone
Complaint	An external or internal report that something went wrong: one customer call, one audit finding, one supplier issue	Issuer (Sales or internal) until validated; QA after	Acknowledgement to the complainant	Yes: a rejected complaint never becomes an NCR
NCR	The ISO 9001 quality record: the validated non-conformance, its root cause, disposition and verification. Numbered, retained, auditable	QA	Resolution deadline set by priority	Yes: internal audit findings and OFIs often have no complaint behind them
Action	One assigned task on an NCR: the corrective action by a PIC, a supplier return, a rework job	The assigned PIC	Action due date	No: always belongs to an NCR

Relationships (**Must**):

- One Complaint opens zero or one NCR. A rejected complaint records the rejection reason and closes without an NCR.
- One NCR links to zero or one originating Complaint, and to one or more Actions.
- One NCR may be linked to other NCRs as *related* or *recurrence of*, so repeat issues are visible.
- Every record carries a full change history: field, old value, new value, who, when.

Record numbering (**Must**): the NCR number is generated by the system on validation, in the format `NCR-YYYY-NNNN`, never reused, never editable. Complaints get their own running number on submission so that rejected complaints are also traceable. **Decide:** whether the existing manual numbering sequence continues or restarts at go-live.

One complaint opens at most one NCR; an NCR owns its actions

data model · 3 records, 3 links

The NCR is the record the auditor asks for; the complaint is how most of them start, and the actions are how they get done.

Field specification: Part 1, Issuer intake

Part 1 is completed by the Sales team or any internal staff member who raises a complaint; it creates a **Complaint** record and, once QA validates it, seeds the **NCR**. Every field the paper form has is kept, and the dropdowns the proposal asked for are confirmed.

Field	Type	Required	Options or rule	Priority
Complaint No.	Auto	System	`CMP-YYYY-NNNN`, assigned on submit	Must
Date raised	Auto	System	Timestamp on submit; not editable	Must
Raised by	Auto	System	Logged-in user; not editable	Must

Field	Type	Required	Options or rule	Priority
Type	Dropdown	Yes	Corrective Action (existing issue) · Preventive Action (potential issue) · Opportunity for Improvement / Suggestion	Must
Source	Dropdown	Yes	Internal Feedback · Internal Audit Finding · External Audit Finding · Management Review Action Item · Supplier / Subcontractor · Customer Feedback · Other (state)	Must
Process	Dropdown	Yes	Prod. (Hyper/Special) · Prod. (Normal) · Powder Coating · Warehouse/Outgoing · Purchasing/Incoming · Logistic · Quality Matters · Sales (Hyper/Special) · Sales (Normal) · Other (state)	Must
Priority	Dropdown	Yes	Low · Medium · High · Urgent/Critical, with the response rule shown as help text	Must
Customer name	Lookup	If Source is Customer Feedback	From the customer master, free text allowed with a warning	Must
Supplier name	Lookup	If Source is Supplier / Subcontractor	From the supplier master, free text allowed with a warning	Must
PO / DO number	Text	Yes	Validated against the ERP when integration exists	Must
Date of delivery	Date	Should	Cannot be later than Date raised	Should
CEF number	Text	Should	**Decide:** confirm what CEF stands for and whether it is a lookup	Should

Field	Type	Required	Options or rule	Priority
Quantity affected	Number + unit	Yes	Unit from a fixed list (pcs, kg, m, set)	Must
Issue description	Rich text	Yes	Minimum 50 characters; the box in the proposal's screenshot	Must
Attachments	Files	Should	Images, PDF, drawings (DWG/DXF); up to 10 files, 25 MB each	Must
Related records	Multi-link	No	Link to earlier Complaints or NCRs for the same customer, supplier or part	Should

Rules (**Must**): all dropdown lists are maintained by QA in an admin screen, not hard-coded. A "(state)" option opens a required free-text field. On submit the record locks for the issuer, moves to *Submitted*, and QA is notified. The issuer can still add comments and attachments but cannot change the original fields; corrections are made by QA and logged.

Field specification: Part 2, QA triage and PIC action

Part 2 has two owners and is therefore two screens: **2A QA triage** (validate, number, prioritise, assign) and **2B PIC action** (root cause and corrective action). The proposal merged them under one heading, which is why it could not say who fills what.

2A: QA triage

Field	Type	Required	Options or rule	Priority
Validation decision	Dropdown	Yes	Accepted · Rejected · Need more info	Must
Rejection reason	Dropdown + text	If Rejected	Duplicate of (link) · Not a non-conformance · Insufficient information · Outside scope · Other (state)	Must

Field	Type	Required	Options or rule	Priority
NCR number	Auto	On Accepted	`NCR-YYYY-NNNN`, generated once, never edited	Must
Confirmed priority	Dropdown	On Accepted	QA may raise or lower the issuer's priority; the change and reason are logged	Must
Respond-by date	Auto, editable	On Accepted	Set from the SLA table; QA may extend with a reason, which is logged	Must
Assigned department	Dropdown	On Accepted	Defaulted from the Process-to-department map, editable	Must
Assigned PIC	Lookup	On Accepted	User in that department; defaults to the department's primary PIC	Must
Customer acknowledgement sent	Checkbox + date	If Source is Customer Feedback	Records that the customer was told the complaint is logged and the expected response date	Should
QA triage notes	Rich text	No	Internal; not visible to the issuer	Should

2B: PIC action

Field	Type	Required	Options or rule	Priority
Containment action	Rich text	If priority is High or Urgent	What was done immediately to stop the problem spreading, and when	Must

Field	Type	Required	Options or rule	Priority
Root cause analysis	Rich text	For Corrective and Preventive types; optional for OFI	Five-Why guidance shown beside the box, as on the paper form	Must
Root cause category	Dropdown	With RCA	Material · Method · Machine · Manpower · Measurement · Environment · Supplier · Design; feeds the Pareto reports	Should
Corrective / preventive action plan	Rich text	Yes	Actions to remove the root cause and prevent recurrence	Must
Action items	Sub-table	Yes, at least one	Each with description, owner, due date, status (Open · Done); these are the **Action** records	Must
Evidence attachments	Files	Should	Photos, test reports, revised procedures	Must
Date action completed	Date	Yes, on submit to QA	Cannot be before Date assigned	Must
Completed by	Auto	System	Logged-in PIC	Must

Rules (**Must**): the PIC cannot submit to QA until the required fields are filled and every Action item is Done. The PIC can request a deadline extension; QA approves or declines, and both are logged. Submitting moves the NCR to *Awaiting verification* and notifies QA.

Field specification: Part 3, QA verification and closure

Part 3 is visible to and editable by QA only, as the proposal asked, and it is where the cost and the effectiveness of the NCR are recorded. Lot Disposition returns here from the paper form; the proposal had dropped it.

Field	Type	Required	Options or rule	Priority
Lot disposition	Dropdown, multi	Yes	Repair / Replace by Supplier · Return to Supplier · Credit Note by Supplier · Rework / Repair by Production · Special Adaption (state by/for whom) · Disposal · Use as is (concession) · Other (state)	Must
Disposition quantity	Number per disposition	Yes	Must sum to Quantity affected	Should
Cost of non-conformance	Currency	Should	Rework hours, scrap value, credit note value, freight; **Decide:** currency and whether labour is costed	Should
Verification result	Dropdown	Yes	Satisfactory: Closed · Non-Satisfactory: Returned for further processing	Must
Return reason	Rich text	If Non-Satisfactory	What is missing or inadequate; shown to the PIC on return	Must
QA justification	Rich text	Yes	Why the result was given; the paper form's "Notes and justification / QA Dept remarks"	Must
Verified by	Auto	System	Logged-in QA user; counts as the signature	Must
Verification date	Auto	System	Timestamp on decision	Must
Effectiveness review due	Date	On Satisfactory, for Corrective and Preventive types	Default 90 days after closure; **Decide:** the period	Must

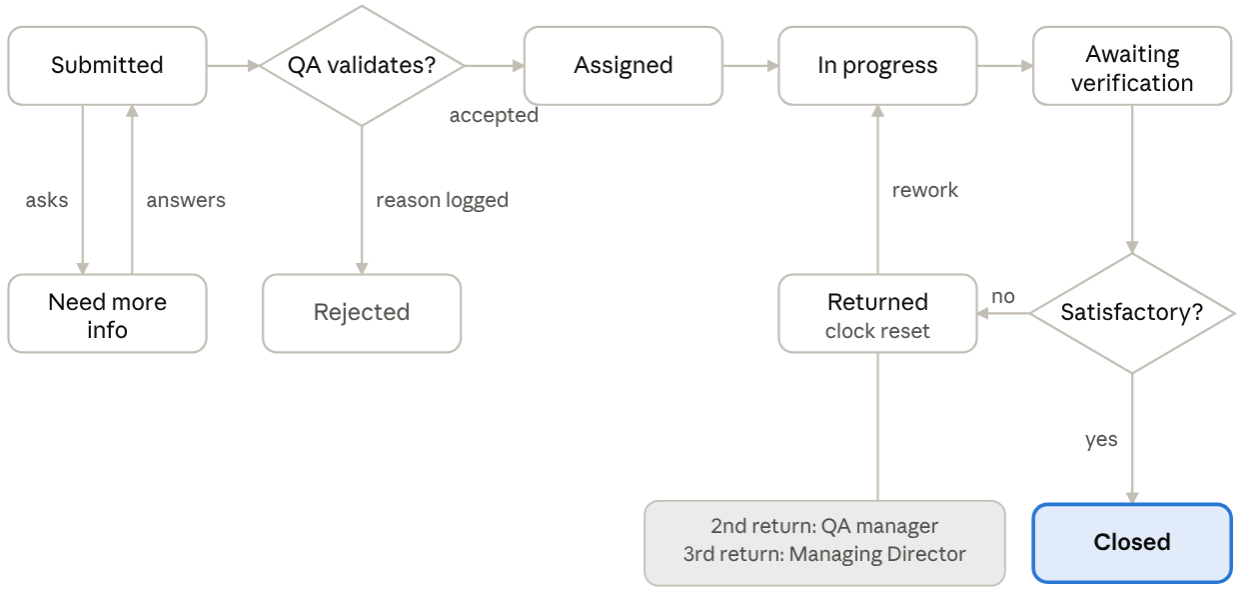

Field	Type	Required	Options or rule	Priority
Effectiveness review result	Dropdown	On review	Effective · Not effective (opens a new linked NCR) · Not applicable	Must
Effectiveness evidence	Files + text	On review	Measurements, audit results, recurrence check	Should

Rules (**Must**): a Non-Satisfactory result returns the NCR to the PIC in state *Returned* with the return reason, resets the respond-by date per the SLA table, and increments a return counter. After the second return the department manager is notified; after the third, the QA manager. Satisfactory moves the NCR to *Closed*, which locks all fields except the effectiveness review. Only the QA manager can reopen a closed NCR, with a logged reason.

Workflow and status lifecycle

An NCR passes through eight states; the proposal's flow stopped at Satisfy / Non-Satisfy, and the return loop, the escalation and the effectiveness review are added here.

Every NCR ends Closed or Rejected; a failed verification loops back to the PIC

NCR lifecycle · 8 states, 2 decisions, 2 loops

The reject branch and the need-more-info loop sit under QA validation; the rework loop runs from Returned back to In progress, and repeated returns escalate.

State	Entered when	Who can move it on	Clock running
Submitted	Issuer submits Part 1	QA	Triage SLA
Need more info	QA asks the issuer a question	Issuer answers, returns to Submitted	Triage SLA paused
Rejected	QA records a rejection reason	Terminal; issuer may raise a new complaint	None
Assigned	QA accepts, numbers, prioritises and assigns	PIC	Resolution SLA
In progress	PIC opens the record or logs the first action	PIC	Resolution SLA
Awaiting verification	PIC submits RCA, actions and evidence	QA	Verification SLA
Returned	QA gives Non-Satisfactory with a reason	PIC, back to In progress	Resolution SLA, reset per table
Closed	QA gives Satisfactory	QA manager only (reopen)	Effectiveness review timer

Rules (**Must**): every transition records who, when and any reason given. A record cannot skip a state. Rejected and Closed are the only terminal states. A reopened NCR keeps its number and its history and returns to Assigned.

Priority and SLA rules

The four priority levels and their response rules already exist on the paper form; the tool turns them into clocks. The working-day figures below are a proposed starting point derived from the form's "5 working days" note and its wording per level. **Decide:** confirm or change every number before build.

Priority	Form's rule	Triage (QA validates)	Response (PIC first action logged)	Resolution (submitted to QA)	Verification (QA decides)
Urgent / Critical	Respond immediately, all resources, legal or compliance risk	4 working hours	1 working day	5 working days	1 working day

Priority	Form's rule	Triage (QA validates)	Response (PIC first action logged)	Resolution (submitted to QA)	Verification (QA decides)
High	Respond by deadline, may interrupt lower-priority work	1 working day	2 working days	10 working days	2 working days
Medium	Respond as soon as feasible against a set deadline	2 working days	5 working days	20 working days	3 working days
Low	Respond as availability allows, extension with CAR Administrator permission	3 working days	10 working days	30 working days	5 working days

Clock rules (**Must**):

- Working days follow a company calendar maintained by QA (weekends and public holidays excluded). **Decide:** working hours for the Urgent 4-hour clock.
- Each clock starts on the transition that opens its state and stops on the transition that closes it. Need more info pauses the triage clock; it does not pause any other.
- A deadline extension needs a reason and an approver: QA for Low and Medium, the QA manager for High and Urgent. The original date is kept beside the extended one.
- A return from verification resets the resolution clock to half the original allowance, rounded up.
- Breach is recorded as a fact on the record (which clock, by how much) and is never deleted when the record later closes.

Alerts (**Must**): the owner of the running clock is notified at 50% elapsed, at 80% elapsed, and on breach. On breach the owner's manager is also notified; a second breach on the same record notifies the QA manager.

Customer commitment (**Should**): where Source is Customer Feedback, the acknowledgement to the customer states the respond-by date, and the tool flags the record if that date passes without a customer update being logged.

Routing, escalation and notifications

Routing is by rule, not by person: the Process chosen at intake defaults the department, the department's primary PIC receives the NCR, and a named backup covers absence. The proposal's "Aishah will transfer the complaint" becomes the QA Coordinator role, which can override the default.

Routing map (**Must**)

Maintained by QA in an admin screen. The departments below are inferred from the Process list; **Decide:** confirm the department names and name a primary and backup PIC for each.

Process	Default department	Primary PIC	Backup PIC
Prod. (Hyper/Special)	Production		
Prod. (Normal)	Production		
Powder Coating	Powder Coating		
Warehouse/Outgoing	Warehouse		
Purchasing/Incoming	Purchasing		
Logistic	Logistics		
Quality Matters	QA/QC		
Sales (Hyper/Special)	Sales		
Sales (Normal)	Sales		
Other	QA Coordinator decides		

Rules: if the primary PIC is marked absent (out-of-office flag or no login for 2 working days on an Urgent record), assignment moves to the backup automatically and both are notified. A PIC can reassign within their department with a reason; cross-department reassignment goes through the QA Coordinator.

Escalation ladder (**Must**)

Trigger	Escalates to
Any clock at 80% elapsed	Owner reminded; owner's manager copied
Any clock breached	Owner's manager; QA Coordinator
Second breach on the same record, or second return from verification	QA manager
Third return from verification, or Urgent breached	QA manager and Managing Director; **Decide:** confirm the top of the ladder

Notifications (**Must** unless marked)

Event	Notified	Channel
Complaint submitted	QA Coordinator	Email + in-app
Complaint rejected or needs more info	Issuer	Email + in-app
NCR assigned or reassigned	PIC, backup, department manager	Email + in-app
Deadline extension requested or decided	PIC and QA	In-app
Submitted for verification	QA Coordinator	Email + in-app
Returned by QA	PIC and department manager	Email + in-app
Closed	Issuer, PIC, department manager	In-app
Effectiveness review due	QA Coordinator	Email, 7 days before
Weekly open-items digest	Every PIC with open items; every manager for their department	Email, Monday 08:00 (Should)

Decide: whether WhatsApp or SMS is required for Urgent alerts, given it is the current chasing channel.

Roles and permissions

Six roles cover the process; a person may hold more than one, and every permission is enforced by the tool, not by convention. The proposal's single rule, Part 3 visible to QA only, becomes the last column below.

Capability	Issuer	PIC	Dept manager	QA Coordinator	QA manager	Auditor
Raise a complaint (Part 1)	Yes	Yes	Yes	Yes	Yes	No
See own complaints	Yes	Yes	Yes	Yes	Yes	Yes
See all complaints and NCRs	No	Own dept	Own dept	Yes	Yes	Yes
Validate, reject, number, prioritise, assign (2A)	No	No	No	Yes	Yes	No
Edit RCA and actions (2B)	No	Assigned only	Own dept	No	No	No
Reassign within department	No	Yes, with reason	Yes	Yes	Yes	No

Capability	Issuer	PIC	Dept manager	QA Coordinator	QA manager	Auditor
Reassign across departments	No	No	No	Yes	Yes	No
Approve deadline extension	No	No	No	Low, Medium	All	No
Verify and close (Part 3)	No	No	No	Yes	Yes	No
See Part 3	No	No	No	Yes	Yes	Read only
Reopen a closed NCR	No	No	No	No	Yes	No
Edit dropdown lists, routing map, SLA table, calendar	No	No	No	No	Yes	No
Manage users and roles	No	No	No	No	Yes	No
Dashboards and reports	Own items	Own dept	Own dept	All	All	All
Export records	No	No	No	Yes	Yes	Yes
Change history	Own items	Own items	Own dept	All	All	All

Rules (**Must**): the system stores every login and every permission change. The Auditor role is read-only for external and internal ISO audits and can be granted for a fixed period. Nobody, including the QA manager, can delete a record; records are closed or rejected, never removed. **Decide:** whether the Managing Director needs a role beyond Dept manager scope.

Dashboard and reporting

The dashboard answers four questions management cannot answer today: what is open, what is late, where it comes from, and what it costs. Three views serve three audiences, and every number is clickable through to the records behind it.

Management view (**Must**)

Tile or chart	Shows	Period
Open NCRs	Count by state, with the number overdue highlighted	Now
Overdue	Count and list, sorted by days over, with owner	Now
New vs closed	Opened and closed per week, as a line	Rolling 12 months

Tile or chart	Shows	Period
Average cycle time	Working days from Submitted to Closed, by priority	Rolling 12 months, vs previous period
SLA attainment	Share of records that met each clock, by priority	Month, quarter
NCRs by Process	Pareto bar: which process generates the most	Month, quarter, year
NCRs by Source	Bar: customer, supplier, internal, audit	Month, quarter, year
Root cause categories	Pareto bar from the Root cause category field	Quarter, year
Cost of non-conformance	Total and by disposition type	Month, quarter, year
Repeat issues	NCRs linked as recurrence, by customer, supplier or part	Rolling 12 months
Return rate	Share of NCRs returned from verification at least once, by department	Quarter

Department and PIC view (**Must**)

My open items sorted by respond-by date, with the clock status (green under 50%, amber 50 to 80%, red over 80% or breached); items awaiting my action; items I submitted that are awaiting QA; my closed items this month. The department manager sees the same for everyone in the department plus workload per PIC.

QA view (**Must**)

Triage queue (Submitted, oldest first); verification queue (Awaiting verification, oldest first); effectiveness reviews due in the next 30 days; extension requests pending; records with a breach this week.

Reports and exports (**Must**)

Report	Used for
NCR register: every record, all fields, filterable by any field and date range, export to Excel and PDF	ISO audits, management review

Report	Used for
Single NCR as PDF in the layout of F/QP/004-01	Customers, suppliers, auditors who expect the form
Supplier scorecard: NCRs, quantity, cost and disposition per supplier	Purchasing reviews
Customer complaint summary: complaints, response time and outcome per customer	Sales reviews
Management review pack: the management view for a chosen period as a PDF	ISO 9001 clause 9.3

Decide: the six to ten numbers management wants on the first screen, and whether the Managing Director wants a weekly email of them.

Compliance and record control

F/QP/004-01 is a controlled record under quality procedure QP/004, so the tool that replaces it inherits the ISO 9001 obligations the paper form met by being signed and filed. Each is a requirement the auditor will test.

Obligation	ISO 9001:2015 clause	Requirement for the tool	Priority
Records are identifiable and retrievable	7.5.3	Unique numbers; search by any field; register export	Must
Records are protected from loss and unauthorised change	7.5.3	No delete; closed records locked; role-based edit rights; daily backup with a tested restore	Must
Changes are traceable	7.5.3	Full change history on every field, who and when, visible to QA and Auditor; history cannot be edited	Must
Signature equivalence	7.5.3	Logged-in identity plus timestamp on Issued, Completed and Verified replaces the wet signature; the login is personal, never shared	Must

Obligation	ISO 9001:2015 clause	Requirement for the tool	Priority
Retention	7.5.3	Records kept for the period QP/004 states; **Decide:** confirm the period, commonly 5 to 7 years, and whether archived records stay searchable	Must
Nonconformity is evaluated, actioned and its effectiveness reviewed	10.2.1	The Part 3 effectiveness review field and its due-date timer; a Not effective result opens a linked NCR	Must
Records of the nature of nonconformity and action taken are retained	10.2.2	Part 1 description, Part 2 RCA and actions, Part 3 disposition and result, all retained with attachments	Must
Management review has input on nonconformities and corrective actions	9.3.2	The management review pack report	Must
Controlled document revision	7.5.2	The PDF output carries the form number and version; a change to field lists or the layout is recorded as a new version of F/QP/004-01	Should
Supplier performance monitoring	8.4.1	The supplier scorecard report	Should

Procedure update (**Must**): QP/004 is revised to describe the tool as the controlled method before go-live, with the paper form retained only as a contingency during system outage. Records raised on paper during an outage are entered into the tool within 2 working days.

Data protection (**Should**): customer and supplier contact details are limited to what the complaint needs, and the Auditor export masks them. **Decide:** whether JEMCO has PDPA or similar obligations that set a stricter rule.

Open decisions and next steps

Fourteen decisions are JEMCO's to make before a vendor is chosen or a build is scoped; the first four block everything else. Each is a short workshop, not a study.

#	Decision	Section	Suggested owner	Status
1	Confirm the three-record data model (Complaint, NCR, Action)	Data model	QA manager, Sales manager	Open
2	Confirm the SLA table: every clock per priority, working hours, calendar	Priority and SLA	QA manager	Open
3	Name the primary and backup PIC per department, and the top of the escalation ladder	Routing	Managing Director	Open
4	Name the six to ten numbers on the management screen	Dashboard	Managing Director	Open
5	NCR numbering: continue the manual sequence or restart	Data model	QA manager	Open
6	What CEF stands for and whether it is a lookup	Part 1	QA manager	Open
7	Currency and labour costing for cost of non-conformance	Part 3	Finance	Open
8	Effectiveness review period (default 90 days)	Part 3	QA manager	Open
9	WhatsApp or SMS for Urgent alerts	Notifications	QA manager	Open
10	Managing Director role scope	Roles	Managing Director	Open
11	Record retention period and archive searchability	Compliance	QA manager	Open
12	PDPA or other data-protection constraints	Compliance	Management	Open
13	Migration: whether and how far back paper NCRs are entered	Scope	QA manager	Open
14	Build or buy: evaluate ERPNext Quality, Odoo Quality, a dedicated QMS and custom build against this document	Scope	Management	Open

Next steps:

- [ ] Circulate this document to QA, Sales, Production and Purchasing for comment by Oct 24, 2026
- [ ] Hold the four blocking workshops (decisions 1 to 4) and record the answers in this document
- [ ] Issue a short request for proposal to two or three candidate platforms using the Must requirements as the checklist
- [ ] Score build versus buy on cost, time to go-live, fit to the Must list, and who maintains it after go-live
- [ ] Revise QP/004 in parallel so the procedure and the tool go live together
